Ist strand cDNA was primed.with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVgPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BX337353 Homo sapiens PLACENTA COT 25-NORMALIZED Homo sapiens CDNA colone CSODIO40Y106 5-PRIME, mRNA sequence.

181 strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMYSPORT & vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           BX354166 958 bp mRNA linear EST 08-APR-2004 BX354166 Homo sapiens NEUROBLASTOWA COT 25-NORWALIZED Homo sapiens CDNA clone CS0DC015YH04 5-PRIME, mRNA sequence.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pcWVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               BX376199 Homo sapiens NEUROBLASTOMA COT 25-NORMALIZED Homo sapiens CDNA clone CSODC024YAl0 5-PRIME, mRNA sequence.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoRV sites of the pcMVSPORT 6 vector. Library was not normalized. Library was constructed by Life Technologies, a division of Invitrogen.

This sequence belongs to sequence cluster 7766.r

For more information about this cluster, see thttp://www.genoscope.cns.fr/cdna?s=CSODA009CB01QP1&c=7766.r.

                                             This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polynucleotide sequence is human KID DNA (SeqID 1) encoding a full length

The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated ATPase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated microtubule motor protein, useful for screening modulators for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation.

activity, a method of testing for ATPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein, and act as a modulator of the binding characteristics or biological activity of a tracting receiv, modulators of the target protein, and methods of treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with Kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular proliferation disorders and inflammation, for treating cellular proliferation disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating disorders and inflammatory bowel disease and angioplasty. This sequence respectable in coding a human microtubule motor protein of the invention. Note: The specification states that this armaar received the protein featured as SEQ ID NO:2, but this does not

                                 This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular conformation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor composed in modulating the activity of target proteins having motor or phosphate. Purthermore, this activity can be determined using cor phosphate. Purthermore readouts. The present invention describes a method that identifies modulators of the target protein, which is a ckinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene content treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polynucleotide sequence is human KID DNA (SeqID 3) encoding a full length con a composition.
                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         360

                                                                                                                                                                                                                                                                                                                                                                                                                              셤
cc proteins, method of testing for ATPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target corporation or act as a modulator of the binding characteristics or biological activity of a target protein, modulators of the target protein, and methods of treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular complexation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating autoimmune chiesas, arthritis, graft rejection, inflammatory bowel disease and proliferation induced after medical procedures including surgery and proliferation induced after medical procedures including surgery and candioplasty. This sequence represents DNA encoding a human microtubule motor protein of the invention. Note: The specification states that this sequence encodes the protein featured as SEQ ID NO:4, but this does not
                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention elates to novel isolated, enriched or purified nucleic acid molecules encoding a kinase polypeptide. The nucleic acid molecule comprises a sequence that: (a) encodes a kinase polypeptide; (b) is a complement of (a); (c) hybridizes under stringent conditions to (a) and encodes a naturally occurring kinase polypeptide; (d) encodes the conjugation of an id), except that it lacks one or more, but not all, of an complement of complement of an actalytic domain, a catalytic domain, a catalytic domain, a cuterminal domain, a coiled-coil structure region, a spacer region and a C-complement of a catalytic domain, a C-complement of (d). The nucleic acid molecules, polypeptides, methods and substance are useful for treating cancers, immune-related diseases or disorders, cardiovascular disease, brain or cutronal-associated diseases, and metabolic disorders. The disorders are controlar or peripheral nervous system, Alzheimer's disease, brain, controlar or peripheral nervous system, Alzheimer's disease, corrections, infections caused by tions, infections caused by fungi, ocular diseases, migraines, pain, conteria, infections caused by fungi, ocular diseases, migraines, pain, conteria, infections, hypertension, psychotic disorders, contition disorders, dyskinesias, metabolic disorders and organ transplant controlation. This sequence corresponds to the DNA encoding one of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      125
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         185

                                                                                                                                                                                                                                                                                                                                                                                      Prostate cancer associated gene sequences, referred to as prostate cancer antigens, useful for treatment, prevention, and diagnosis of disorders such as prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB50303 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynuclatorides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and profiferative disorders, wounds, and infectious diseases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polymucleotide sequence is human KID DNA (SeqID 5) encoding a full length

                                                                                                                  ð
                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated ArPase for modulators of a motor protein which has microtubule stimulated ArPase activity, a method of testing for ArPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or biological activity of a target protein, modulators of the target protein, and methods of treating cellular proliferation disorders such as and inflammation, for treating disorders associated with kinesin-like DNA condining protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular condining protein disorders and inflammation, for treating disorders concer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating autoimmune consisted with KID and for inhibiting KID and for thibiting KID and for thibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted angioplasty. This sequence represents DNA encoding a human microtubule angioplasty. This sequence represents DNA encoding a human microtubule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      243

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                               This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity of an bedtermined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunoancodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polynuclecide sequence is human KID DNA (SeqID 7) encoding a full length KID enzyme of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    183

```
The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening corrections of a motor protein which has microtubule stimulated ArPase activity, a method of testing for ArPase activity of microtubule motor corrections, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or correction or act as a modulator of the binding characteristics or protein or act as a modulator of the binding characteristics or correction, and methods of a target protein, modulators of the target protein, and methods of treating callular proliferation disorders second inflammation, for treating disorders associated with kinesin-like DNA correcting for modulators of motor proteins useful for treating callular correcting for modulators of motor proteins useful for treating callular correcting for modulators of motor inflating KID. The sequences are used for screening for modulators of motor proteins useful for treating autoimmune disorders and inflammation, for treating autoimmune confiscated with KID and for inhibiting KID and for treating autoimmune confiscated with KID and for inhibiting KID and for treating autoimmune confiscated with KID and for inhibiting KID and for treating autoimmune confiscated with KID and for inhibiting KID and for treating autoimmune confiscated with KID and for inhibiting KID and for treating autoimmune confiscated with KID and for inhibiting KID and for treating and indicated after medical procedures including surgery and angioplasty. This sequence represents DNA encoding a human microtubule contor protein of the invention.
New isolated microtubule motor protein, useful for screening modulators for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1464 BP; 342 A; 409 C; 428 G; 285 T; 0 U; 0 Other;

```
The invention relates to an isolated polynuclectide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences care useful in diagnostics as expressed sequence tags (EST) for information, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense DNA or RNA. The purified polypeptide is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at

The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and sequences in the specification, or their complements or fragments, and equences in the specification. The probe is a single axon probe that the relationship of the specification. The probe is a single axon probe that the relationship of single daressed in human cells or tissues. Also included are a spatially. A spressed in human cells or tissues. Also included are a spatially of expressed in human cells or tissues. Also included are a spatially of addressable set of single exon nucleic acid probes for measuring human gene expression, a method of and addressably isolatable or amplifiable from the plurality, a single contiguous amino acids of any of the above- mentioned amino acid subscription, and configuous amino acids of any of the above- mentioned amino acid solutions and/or licensing single exon probes or microarray to record sequences (optionally with conservative amino acid substitutions), an extend of sealing and/or licensing single exon probes or microarrays to a customer destring to measure gene expression, a method of providing methods of sealing and/or licensing single exon probes or microarrays to a customer destring to measure gene expression of a single exon probe of the probe, methods and datables that purelity of records to record including data on the expression of a single exon probe of the probes may be used as tools for surveying trisques to detect the presence of expressed measages that contain their caperonic the probes may be used as tools for surveying trisques to detect the presence of expressed measages that contain their capecting and characterising grows a literative splicing events, in detecting and characterising of a human gene expressing the Order prope are used in identifying and characterising and characterising and expressing the genomic locus that includes their expressing Score 233.2; DB 12; Length 531; Pred. The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences this defined in the specification. The probe is a single exon probe that this defined in the specification. The probe is a single exon probe that the expression (comprising a plurality of probes for measuring human gene expression (comprising a plurality of single exon nucleic acid probes cited above, where each of the plurality of probes is separately and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a wettor comprising the single exon probe cited above, an ORF-encoded peptide comprising the single exon probe contiguous amino acids of any of the above—mentioned amino acid of solated on the specifically to a peptide cited above, and/or licensing single exon probes or microarrays to a customer desiring to measure gene expression, a method of providing contrage medium which contains a database having a plurality of records cited above. The probe, methods and apparatum are useful in gene expression analysis. The probes may be used as tools for surveying cited above. The probe, methods and apparatum are useful in gene expression analysis. The probes may be used as tools for surveying cited exon, or in constructing genome-derived single exon microarrays.

In addition, the probes are used in identifying and characterising alternative splicing events, in detecting and characterising gross alterations in the genomic locus that includes their exon, in assessing smaller genomic alterations, in priming the synthesis of nucleic acids, or in expressing the ORF-encoded peptide. The present sequence is a human single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel human polynucleotide and the encoded polypeptide. A polynucleotide of the invention may have a use in gene therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful
                                                                                                                                                                                                                                                      821

as a primer for synthesizing the polynucleotide or as a probe for detecting the polynucleotide. The polynucleotides ADM03154 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM03759-ADM06201 encoded by the polynucleotides are useful as pharmaceutical agents. The present sequence represents a cDNA sequence of the invention.

Submitted (20-JUL-2004) Genoscope - Centre National de Sequencage :
BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
- Web : www.genoscope.cns.fr)
1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and Cloned into the Not I and EcoR V sites of the pCWNSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.
